The daFO People®

Supra-malleolar (SMO) trimline, PF free, DF free

Key Concept — Helps young children with correctable moderate to strong pronation and supination to re-align their base of support for improved stability in standing and walking.

Full wrap-around flexible support encompasses the foot and ankle for pronation and supination control. A well-defined plantar surface and compression provides proprioceptive input. Solid outer foundation adds extra arch support and heel stability. The SMO trimline gently guides medial/lateral ankle alignment and fully encompasses the heel and forefoot for excellent alignment control.

Key Features

Full-wrap inner liner

allows full alignment control of the heel, midfoot, and forefoot. Made from soft, thin polyethylene plastic.

Solid outer foundation

provides additional support and heel stabilization. Two material options: polyethylene for moderate flexibility or co-poly for firm support.

Open ankle trimline

allows free plantarflexion / dorsiflexion movement.

Prefabricated, fit to measure

Widths: Wide and Narrow

Sizes: 4.00 – 9.00 in. (0.25 in. increments)

Indications

- Fully-correctable foot position
- Moderate to strong pronation or supination and associated gait instability
- Access to free PF/DF is desired

Contraindications

- Uncorrectable foot positions
- Very strong pronation or supination
- Need to restrict PF/DF

Support Provided

Hindfoot

Strong — heel fully captured

Forefoot

Strong — full-wrap inner liner

Ankle

Mild — free plantarflexion / dorsiflexion; moderate medial / lateral control

No casting needed!
